

Generative AI Gen AI - Seminar

Candidate: Aafreen Khan | Department of Computer Applications

1. Introduction

Generative Artificial Intelligence Gen AI is a branch of AI that can create new content based on the instructions given by a user.

2. How Gen AI Works

Step 1: User Prompt Input

Step 2: Gen AI Model processing via Large Language & Diffusion Transformers

Step 3: Pattern matching against billions of trained weights

Step 4: Generated High-Fidelity Output Text, Image, Code

3. Real-World Applications

Software engineering copilot and automated code completion

Medical imaging analysis and molecular synthesis

Personalized interactive tutoring in higher education
