

Oracle SQL (Structured Query Language)

1.] DDL & DML are two types of SQL sub languages used for different purposes in managing & manipulating databases.

2.] DDL (Data Definition Language) $\Rightarrow$ To modify, define and manage the structure of tables, indexes & views.

- | | | | |
|-------|---------------|----------|---------------------------|
| (i) | $\rightarrow$ | CREATE | } 5 types of DDL Commands |
| (ii) | $\rightarrow$ | ALTER | |
| (iii) | $\rightarrow$ | RENAME | |
| (iv) | $\rightarrow$ | DROP | |
| (v) | $\rightarrow$ | TRUNCATE | |

3.] DML (Data Manipulation Language) $\Rightarrow$ It manipulate & manage data in database tables.

- | | | |
|-------|---------------|--------|
| (i) | $\rightarrow$ | INSERT |
| (ii) | $\rightarrow$ | DELETE |
| (iii) | $\rightarrow$ | UPDATE |

* **SELECT** $\Rightarrow$ It is the DQL (Data Query Language) Command

DQL $\Rightarrow$ It focuses on querying data from the database.
